3.4.2 Referenced Client Actions

Name	Owner	Description
 IsValidNumber	InternationalTelephoneInputReactive	Check if the current number is valid based on its length, which should be sufficient.
 GetNumber	InternationalTelephoneInputReactive	Get the current number in the given format (defaults to E.164 standard). Note that the number must be in the given format.
 SetNumberAsynchronous	InternationalTelephoneInputReactive	Calls setNumber asynchronous
 GetSelectedCountryData	InternationalTelephoneInputReactive	Get the country data for the currently selected flag.
 ListFilter	(System)	Returns a new list with the elements from the List parameter satisfying the given criteria.
 ListInsert	(System)	Inserts an element in a specific position of a list.
 ListIndexOf	(System)	Returns the position of the first element of the List parameter that satisfies the given criteria.
 ListRemove	(System)	Removes an element from a specific position of a list.
 ListAppend	(System)	Adds an element to the end of a list.
 ListClear	(System)	Removes all elements from a list.
 ListSort	(System)	Sorts the elements of the List parameter by the given criteria.
 ListAppendAll	(System)	Adds the elements of the source list to the end of the destination list.
 ListAny	(System)	Determines if any of the elements in the list satisfies the given condition.

 GetGridRowCount	IE_Common_CW	
 CarouselGoTo	OutSystemsUI	Set the item that Carousel will go to.
 FeedbackMessageClose	OutSystemsUI	Closes the FeedbackMessage that is currently open.
 DatePickerOpen	OutSystemsUI	Opens a DatePicker block with a given identifier.
 DropdownClose	OutSystemsUI	Closes the options list of a Dropdown (DropdownTags or DropdownSearch) block.
 ClearFilter	OutSystemsDataGrid	Clear filter on a given column.
 DeactivateFilter	OutSystemsDataGrid	Deactivate filter on a given column.
 GetCheckedRowsData	OutSystemsDataGrid	Returns the DataSource for all the checked rows on the Grid
 FreezeColumns	OutSystemsDataGrid	Responsible to freeze the leftmost columns from grid.
 SetViewLayout	OutSystemsDataGrid	 The changes performed by this API cannot be undone by the end-user (Ctrl/Cmd+Z). Sets a grid layout. This parameter supports Filters, Sort, Group panel, Column (size, position, and visibility).
 UpdateStartingRowHeader	OutSystemsDataGrid	 The changes performed by this API cannot be undone by the end-user (Ctrl/Cmd+Z). Update the number of the row displayed on the first column of a given data grid.
 GetViewLayout	OutSystemsDataGrid	Returns the configuration for Filters, Sort, Group panel, Column (size, position, and visibility).
 UnfreezeColumns	OutSystemsDataGrid	Unfreezes all columns from the grid.

 OutSystemsCharts
This component features the most commonly used chart types to easily generate visual representations of data in Web and Mobile apps.
Version 3.9.0

 (System)
System Objects

Actions:

 ListIndexOf	Returns the position of the first element of the List parameter that satisfies the given condition, or -1 if no element satisfying the condition was found.
 ListSort	Sorts the elements of the List parameter by the given criteria.
 GenerateGuid	Generates and returns a new GUID.
 ListRemove	Removes an element from a specific position of a list.
 ListFilter	Returns a new list with the elements from the List parameter satisfying the given condition.
 ListAppend	Adds an element to the end of a list.
 ListAny	Determines if any of the elements in the list satisfies the given condition.
 ListClear	Removes all elements from a list.
 ListAppendAll	Adds the elements of the source list to the end of the destination list.

 HTTPRequestHandler

For version 11.40.0. Provides actions to manipulate HTTP Requests and Responses.

Actions:

	GetRequestDomain	Returns the host part of the current HTTP request as seen by the browser. Example: when the browser uses the address "http://support.c
---	------------------	--

 Text

For version 11.40.0. Provides actions to manipulate character strings such as joining, splitting, search and replace using regular expressions, and custom formatting of DateTime expressions.

Actions:

	Regex_Replace	Replaces all occurrences of a specified regular expression pattern with a replacement string.
	String_Split	Splits a string into individual elements delimited by any of the characters in Delimiters.
	String_Join	Concatenates all the strings in a List, yielding a single string. The individual elements are separated, in the resulting string, by the string Sep
